## SUMMARY

1st-year Computer Engineering student and Founding member of IEEE İSTÜN CyberSec with hands-on experience building and shipping full-stack products. Co-developed a production-ready B2B SaaS logistics platform, focusing on scalable frontend architecture, real-time systems, and secure application design. Led industry-facing initiatives by organizing cybersecurity and software architecture panels with senior engineers, helping connect student talent with enterprise technology networks. Interested in frontend systems, cybersecurity, and AI-assisted software development.

## PROJECTS

### LOOP, B2B SaaS Logistics Platform

<https://github.com/omerkurt1/lojistikweb.git>  
[lojistikweb-vitrin.vercel.app/](https://lojistikweb-vitrin.vercel.app/)

**Role:** Frontend Developer & System Architect

**Tech Stack:** React (Vite), Node.js, Express.js, MongoDB, Socket.IO, Leaflet.js, JWT Auth, Docker, Context API

- Architected and delivered a production-grade SPA for logistics operations, combining live fleet monitoring, operational visibility, and financial overview workflows in a single platform.
- Designed the frontend architecture with reusable React components and Context-based global state, eliminating prop drilling and improving maintainability and onboarding speed for new features.
- Implemented persistent UX preferences (theme and language) with Context API + localStorage, enabling seamless cross-session user experience for multilingual users.
- Built real-time courier tracking with Socket.IO + Leaflet and open map tiles, avoiding proprietary map vendor lock-in and minimizing recurring third-party API costs.
- Engineered role-based route protection and auth guards for the admin ("God Mode") dashboard, enforcing strict separation between public pages and privileged operational data.
- Containerized frontend and backend with Docker and docker-compose, creating a cloud-agnostic deployment workflow that improved environment consistency and reduced setup friction across development and release stages

## LEADERSHIP & COMMUNITY

### EXPERIENCE

#### Founding Member | IEEE İSTÜN CyberSec

- Organized and hosted an enterprise-level cybersecurity and software architecture panel featuring 3 senior engineering leaders from Coca-Cola İçecek (1 Principal Software Architect, 2 Software Architects).
- Led end-to-end event execution, including speaker outreach, agenda design, live moderation, and audience Q&A facilitation.
- Co-organized hands-on technical workshops and CTF-focused sessions to strengthen practical cybersecurity skills and secure coding awareness.
- Built industry-academia connections by coordinating technical networking opportunities and visits to major R&D ecosystems, including Technopark Istanbul.

## EDUCATION

### İstanbul Sağlık ve Teknoloji Üniversitesi,

*Bachelor of Science: Computer Engineering*

09/2025 – Present | İstanbul, Turkey

## SKILLS

### Frontend

React.js (Vite), JavaScript (ES6+), Context API, SPA Architecture

### Backend & Database

Node.js, Express.js, MongoDB, Socket.IO, JWT Auth

### DevOps & Tools

Linux, Docker, Git/GitHub, Postman, Render/Vercel, Codex, Ollama

### Core & Security

C, C++, Python, SaaS Architecture, Cybersecurity

## LANGUAGES

**Turkish** (Native) | **English** (Advanced)
