SUMMARY

First-year Computer Engineering student and founding member of IEEE İSTÜN CyberSec. Co-developing LOOP, a production-ready B2B logistics platform currently under consideration for the TÜBİTAK BiGG entrepreneurship program. Experienced in frontend architecture, real-time systems, secure application design, cloud deployment, and privacy-first civic technology.

LEADERSHIP & COMMUNITY EXPERIENCE

Founding Member | IEEE İSTÜN CyberSec

- Organized and hosted an enterprise-level cybersecurity and software architecture panel featuring three senior engineering leaders from Coca-Cola İçecek.
- Coordinated technical workshops, CTF sessions, speaker relations, and industry networking initiatives.

EDUCATION

İstanbul Sağlık ve Teknoloji Üniversitesi,

Bachelor of Science: Computer Engineering

09/2025 – Present | İstanbul, Turkey

SKILLS

Frontend

React.js, Next.js, JavaScript (ES6+), Context API, SPA Architecture

Backend & Database

Node.js, Express.js, MongoDB, Socket.IO, JWT Auth

DevOps & Tools

Linux, Docker, Git/GitHub, Postman, Render/Vercel

Core & Security

C, C++, Python, SaaS Architecture, Cybersecurity

LANGUAGES

Turkish (Native) | English (Advanced)

PROJECTS

LOOP, B2B SaaS Logistics Platform

<https://github.com/omerkurt1/lojistikweb.git>

lojistikweb-vitrin.vercel.app/

Role: Frontend Developer & System Architect

Tech Stack: React (Vite), Node.js, Express.js, MongoDB, Socket.IO, Leaflet.js, JWT Auth, Docker, Context API

- Co-developed a production-ready B2B SaaS logistics platform currently under consideration for the TÜBİTAK BiGG entrepreneurship program, with the goal of establishing LOOP as a technology venture.
- Architected the scalable React frontend using reusable components and Context-based global state management.
- Built real-time courier tracking with Socket.IO and Leaflet while avoiding proprietary map-provider dependency.
- Implemented role-based authorization, protected administrative workflows, multilingual preferences, and Dockerized deployment infrastructure.

UrbanPulse,

Privacy-First Municipal Intelligence Platform

<https://github.com/omerkurt1/cursor.git>

<https://city-intelligence-dashboard.vercel.app/>

Role: Co-Developer & Frontend Integration Lead

Tech Stack: Next.js, React, Leaflet, Vitest, Vercel, Render

- Co-developed a civic-tech platform that converts anonymized municipal vehicle detections into a city-wide maintenance map and prioritized action queue.
- Led dashboard architecture and Go API integration, implementing municipal KPIs, route scans, issue-management workflows, and printable reports.
- Built data-minimization safeguards that reject identity and tracking fields while validating anonymization evidence.
